

Business Continuity & Disaster Mitigation Services

IntraSource is a seasoned and reliable business partner that offers you secure, reliable and affordable Business Continuity / Disaster Mitigation (BC/DM) solutions. Whether it is delivered as a outsourced managed service or as a turnkey system, our clients know that IntraSource can implement a solution to address their BC/DM needs.

How Do We Implement our IntraVAULT BC/DM ?

Business Continuity / Disaster Mitigation (BC/DM) is the process of ensuring that your IT infrastructure can quickly be recovered following a “disaster” -- which may be a deleted file, a failed mail server or a complete loss of the server room. Inherent in this is our superior customer service and full support of retention rules for compliance and cost considerations. We implement our BC/DM through the following managed services suite.

<p>Data Backup and Restore</p> <p>The data on your mail, file & print, database and applicaiton servers is backed up locally and offsite. 99% of restores occur from the local storage at LAN speeds. Strict SLAs govern the restores of data from the off-site storage.</p>		<p>Recovery Site Hosting</p> <p>If your entire IT infrastructure is lost, IntraSource’s DataVaulting service can host your critical servers at our DS3 data center. Access is provided through a VPN, Citrix or other custom secure access solution.</p>
<p>Customer Site Server Recovery</p> <p>A common “disaster” is the loss of a server on your LAN. We restore the server on a virtual environment within minutes. Since the recovered server has the same configuration as before, client computers do not change their settings.</p>		<p>Data Lifecycle Management & Discovery</p> <p>To reflect data’s decreasing value over time, BC/DM migrates data from online to nearline to offline storage, resulting significant cost savings.</p>

In the cloud or in a box - just plug in

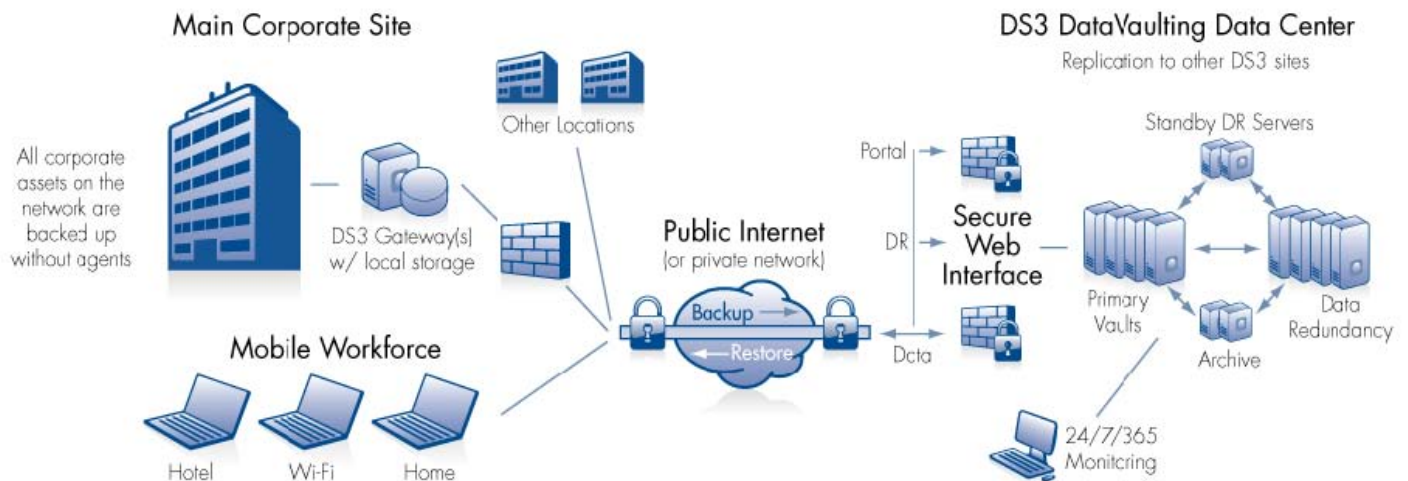

What BC/DM Means for You

With recent studies showing that 90% of companies go out of business within 2 years after a disaster, it is clear that a new paradigm of corporate data protection is required. The IntraVAULT Managed Service is a BC/DM solution that includes:

- ▶ Both Data Backup and Restore providing 99+% reliability, with built in data encryption and off-site storage for critical data.
- ▶ Data Lifecycle Management and Discovery services provide storage & legal discovery value.
- ▶ Customer Site Server Recovery allows operations to resume quickly after the most common disaster.
- ▶ Recovery Site Hosting means that the unimaginable will not halt your business.

We've made BC/DM easy for you: in the cloud (managed server) or in a box (turnkey system), just plug in.
